CAN I GET MY LASHES WET?

Yes. There's a common misunderstanding that you need to wait 24 hours before getting your eyelash extensions wet. While this may have been true in the past, lash glues available today cure much more quickly. Feel free to wash after your appointment if you experience any irritation or sensitivity to the glue.

HOW OFTEN DO I NEED TO WASH MY LASHES?

I recommend washing your lashes at least once a day. Dirt, oil, and other matter can build up on your lashes causing them to fall out faster. If you don't wash your lashes you can get eye infections, bacteria build up, or even lash mites.

WHAT DO I USE TO CLEAN MY EXTENSIONS?

I recommended to use a lash cleanser specifically made for extensions. Every day face washes, baby washes, or makeup removers can include minerals and oils that break down the bond of the glue. I offer washes and brushes specifically designed to get in between eyelash extensions and remove dirt, oil, and makeup.

HOW DO I WASH MY LASHES?

Everyday get your lashes wet with warm water, pump one pump of lash cleanser onto your hands or lashes and gently rub the cleanser into your lashes along the entire edge of your eyelid. Rinse with warm water and then gently pat dry or use a fan. Last, brush them out.

WHAT PRODUCTS DO I NEED TO AVOID WITH EXTENSIONS?

Anything that has oils! Oils breakdown the bond of the glue and acts as a lash remover. Look for face washes, moisturizers, sunscreens, and makeup that are oil free. If you use any products that contain oil, avoid the area around your eyes.

WHAT HAPPENS IF I TOUCH OR RUB MY LASHES?

Constantly touching, rubbing, or picking your lashes causes them to fall off more quickly. Oils from your fingers will transfer to the eyelash and cause them to fall off. Do all you can to avoid touching your eyelash extensions unless washing them with clean hands.

WILL HEAT AND STEAM AFFECT MY LASHES?

Yes! Exposure to heat can melt the glue or even singe the lash and steam can cause the curl to go flat. Be mindful of the heat from stoves and ovens and the steam from showers.

WHAT WILL HAPPEN IF I SLEEP ON MY EXTENSIONS?

Sleeping on your extensions is an easy way to cause poor retention and poor lash growth. If the extensions are being pressed against your face, the oils from your skin can cause them to fall out faster. This can cause your natural lashes to grow incorrectly and cause irritation. Do all you can to avoid anything pressing against your lash extensions.
